

Innovation as core

**wireless!**

## Wireless Wave Control System

- Safest wireless control system in the world
- Compliant with all industry standards
- Wireless connection replaces signal cables
- Light weight wireless gun improves productivity
- Wireless Master Control enhances safety
- Constant bi-directional communication
- Compatible with approved high pressure jetting systems

Wireless Wave Master Control

Wireless Wave Gun

Wireless Wave Foot Gun

## World's safest control system for pump operator and jet operator

- No more failures on signal cables or connectors
- Light weight gun introduces new safety and manoeuvrability features
- No more need to apply expensive, heavy weight signal cables
- Compatible with approved high pressure water jetting systems
- Only system for safe operation open Hose Control

### A revolution for the industry

The Wireless Wave Control System integrates wireless technology, with a brand new ergonomic design and safety features that will benefit both contractor, operator and client alike.

### Wireless control up to 500 meters

The essence of the Wireless Wave Control System (WWCS) is crystal clear: jet operators no longer need to drag a signal cable in order to control their high pressure water unit. Instead: a WWCS-Reception-module is installed on the high pressure unit and receives operating signals wireless from the jetting operators' gun or footgun or the machine operators' Master Control. Up to a distance of 500 meters. The system complies with all relevant industry and safety directives, such as ATEX/EMC.

### Save time, energy and money

The wireless way of working is not only easier and lighter for the operators, it also prevents costly 'down time' due to damaged signal cables or the necessity to install long lengths of extra signal cables.

### Safest gun in the world

On top: the light weight Wireless Wave Gun is easy to handle and offers new manoeuvrability options, due to the sideways moveable handle, including two triggers (vertical and horizontal). New safety features include a triggerlock and an anti-vibrational design. It makes the WWCS-Gun the safest and easiest gun available in the market.

The Wireless Wave Control System has been invented and developed by DERC Waterjetting and Mourik Services and is now available for the industry.
